

NUPAFEED[®] Magnesium DAILY LIQUID Feeding Instructions

How MAH[®] Works

- Horses burn off magnesium when they are under stress, nervous or excited.
- The way we work, travel, show and feed our horses it is common for horses to burn off more magnesium than their daily diet provides.
- This results in the magnesium calcium balance being disrupted, and allows calcium to overload muscle and nerve cells resulting in a rise of adrenaline, nervousness, aggression, spookiness, muscle tension etc.
- NUPAFEED[®] Magnesium Oral Syringes provide horses with a extra magnesium. The more stress they become the more magnesium they burn.

Advice on Feeding and Dosage

- Initial loading dose is important to correct the magnesium calcium deficiency.
- Maintain the loading dose until you have seen a significant improvement. Normally this is between 3 and 5 days. Some may take less or more time depending on how low their mag. levels are & how highly strung they are throughout the day etc.
- Once improvement is seen we recommend a gradual reduction to the advised maintenance dose. If your horse behavior reverts back they may require a larger maintenance dose.

Advised Loading Dose – to be maintained until a significant improvement has been seen.

Height	Approx. Weight	Daily Amount
11-12h	330 - 550 lbs	30ml x 2 Daily
13-14h	550- 880 lbs	60ml x 2 Daily
15-16h	880 - 1100 lbs	90ml x 2 Daily
17+h	1100 + lbs	90ml x 2 Daily

Maintenance Dose – May vary depending on the horses level of stress.

Height	Approx. Weight	Daily Amount
11-12h	330 - 550 lbs	15ml x 1 Daily
13-14h	550 - 880 lbs	30ml x 1 Daily
15-16h	880 - 1100 lbs	30-60ml x 1 Daily
17+h	1100 + lbs	60ml x 1 Daily

General Advice

- Add NUPAFEED[®] Daily Liquid just before feeding so it is not absorbed into the grain.
- Try to avoid feeding with soaked beet pulp. It can hinder absorption.
- Nupafeed[®] liquid takes 3 hours to absorb. Think ahead when feeding. Nupafeed[®] doesn't work like a sedative so it is important that it is absorbed before a stressful situation.
- Remember you can not overdose on Nupafeed[®] Magnesium. They will excrete any excess through sweat or urine.
- You can increase the daily liquid at least 24 hours before the level of stress may increase (i.e. showing, traveling, clinic).
